Cesar Sosa

Full-stack Junior web developer

About Me

A hard working developer able to work under a lot of pressure and hard schedule . I have experience building and shipping front-end, back-end, desktop & mobile apps using react, react-native, expo, electron, graphql, REST among others. Comprehensive software testing including unit testing, snapshot & functional.

Experience

FRONT END DEVELOPER

- Developed a headless wordpress theme using react, redux & react-router.
 - Use redux-saga and after redux-thunk to handle asynchronous code.
 - Applied TDD, unit and snapshot testing.

BACKEND DEVELOPER

- Developed and shipped to Amazon lightsail a prisma service and a graphql-yoga server for a web, desktop & mobile application
 - Created a clean graphql schema api for an inventory app where the client can authenticate, create, delete, modify and subscribe to data change seamlessly.
 - Installed node, docker & docker compose in a ubuntu instance using ssh to deploy the prisma service, and the graphql-yoga server using pm2. Both in the same instance.

MOBILE & DESKTOP DEVELOPER

- Built and shipped a universal app that runs in mac, linux, windows, web, android & ios all using the same codebase with react-native, react-native-web, expo & electron
 - Created a webpack config that builds the mobile react-native app to a web app that runs in electron with the help of react-native-web.
 - Added auto-update support for the desktop app with electron-builder using a generic server with express.

Professional Skills

- | | | | |
|----------------|-------------|----------------|-------------|
| • ReactJS | <div></div> | • react-router | <div></div> |
| • Expo | <div></div> | • Bootstrap | <div></div> |
| • React Native | <div></div> | • redux | <div></div> |
| • Webpack | <div></div> | • bulma | <div></div> |
